Sheer Necessity Was the “Mother of Our Inventions”

EZ Animal Products is founded on innovation and the development of products that overcome real-life challenges. Started in 1995, EZ Animal Products began in my family’s garage. We remain a family-owned and operated private corporation to this day. Our son, John, has been working side by side with us for the past 31 years and helps to continue our efforts today.

Back in 1993, my wife Karen and I were training horses at Remington Park in Oklahoma City. We were with a filly that we were getting ready to sell. While I was working on the filly’s back end, Karen held the “twitch” on the filly’s lip. All of a sudden, the filly struck Karen. After suffering injury, my wife refused to ever hold that twitch again. I then found myself searching for a way to restrain a horse all by myself. There were no options in the marketplace that could help me. So, I set out to develop a system that I learned through my Native American Heritage while growing up on the Standing Rock Sioux Reservation in N. Dakota, an adaptation and improvement of the Indian War Bridle.

After countless prototypes, R&D clinics, and hands on experience, The Stableizer® was born. Research studies and Kentucky Derby winners alike have since attested to The Stableizer’s® usefulness in training, restraining, and attending to the veterinary needs of horses. In fact, Grindstone (1996 winner of the Kentucky Derby) and Editor’s Note (1996 winner of the Belmont) are among many horses that have used The Stableizer® as part of their training regimen.

1970 Kentucky Derby Winner,
Street Sense.

Buck, John and Karen of EZ Animal Products.

The Stableizer® is assembled in our
Iowa plant.

Maintaining Your Homestead the EZ Way

Our innovations continued in 2004 when we set out to develop a safer and smoother method of collecting colostrum from our mares. Traditionally, a 60cc syringe had been used, but with it came obvious challenges. To overcome these challenges and offer a better solution to others in similar situations, we developed the hand-held, vacuum pump Udderly EZ™ Mare Milker. The Mare Milker has since been shipped to a multitude of countries and has been used on a variety of animals.

In 2010 we introduced the Ultimate EZ™ Electric Bottle and Bucket Milkers. But our innovations didn't stop there. To make the electric kits completely portable, we added the option for a 300-Watt inverter which allows the milker to operate anywhere - no power cord needed - using the client's own power tool batteries. We have also added the Ultimate EZ Milker Cart™ which holds everything you need for milking, and comes right into the stall with you.

Innovations and product improvement are central to who we are. Our research and manufacturing operations are always developing new products and looking for ways to upgrade the ones we have. If you have any suggestions or comments, please send them my way. We are always on the lookout for new and innovative products that will make the lives of our customers easier and more convenient.” As they say, “The Buck Stops Here!”

As an information source and a quick study of how our products work, we have added several QR Codes to show exactly the products function and how to use them properly.

Portable electric milking kit and cart.

Karen and Buck with the first hand-held vacuum pump.

Special accessory lid to milk three goats or sheep at once. (See page 18)

"Instructing the next generation of future Homesteaders."

The Udderly EZ Milker™ has been in the world marketplace since 2004. Originally developed for collecting colostrum from mares, it has since been put to use for daily milking of cows, goats, sheep and many other species, with three sizes of silicone inflations available. It has been endorsed by animal husbandry and veterinary professionals around the world.

UDDERLY EZ MARE MILKER

Mare Milker Kit includes:

- The Udderly EZ pump
- 2 – #2 extraction cylinders
- 2 Silicone inflation inserts (medium and large)

*if small is required order off the accessories page
- Bottle nipple
- Udder wipes
- 1 quart and 1 pint, milk/colostrum collection bottles with caps
- Operation Manual and DVD
- Microfiber Dairy Towel

EZ005 – \$195.00

The Importance of giving colostrum as soon after birth as possible.

Colostrum is the thick, yellowish “first milk” produced in the first 2-5 days postpartum, rich in antibodies, protein, and nutrients crucial for a newborn’s immune system and gut health. It acts as a concentrated “super-food” that protects against infections, helps pass the first stool, and prevents low blood sugar, despite being produced in small volumes suited for a newborn’s tiny stomach.

Shepherdess Ellen K. Gudmestad,
Udderly EZ user from Bryne, Norway

Ultimate

EZ™ MILKER

Most cows milk out in 7 minutes.
Available in single or double bucket carts.

Based on customer requests and a need to expand our popular Udderly EZ line of milkers, the Ultimate EZ Milker™ was born in 2010. The Ultimate EZ Milker™ comes with a variety of options including stainless steel and food grade plastic milk buckets, different power options (110v/220v), a 300w tool battery inverter, and even a compressed air model. A specially designed aluminum cart is now available to carry the unit, making it conveniently portable.

Scan QR code to see the milker in use!

SLAVIC BEAUTY CREAM SEPARATORS

These separators are assembled in Austria and do a great job for a small family with a cow or a few goats, and it separates for Cows, Goats, and Sheep at a very affordable price.

HAND OPERATED CREAM SEPARATOR - 80 L/HOUR CAPACITY

Capacity: 26 gallons of milk per hour • Material: Anodized aluminum • Usage: Ideal for small farms and dairies.
Made in Austria; Efficiently separates milk.

TAN STAINLESS STEEL MILK BOWL

Motor casing, drum, spouts, and discs are made of high-quality anodized food-grade aluminum.

SB18 - METAL – \$400.00

BLUE STAINLESS STEEL MILK BOWL

It has plastic motor casing and float chamber stainless steel milk bowl.

SB17 - METAL/PLASTIC

\$350.00

MANUAL CREAM SEPARATOR - 26 GAL / 100 L PER HOUR

Separate fresh cream anywhere; no electricity required. This household hand-operated Slavic Beauty cream separator is designed to separate whole milk into cream and skim milk while also removing impurities during separation. With a processing capacity of up to 26 gallons (100 liters) per hour, it provides the performance of a high-capacity separator in a completely manual, portable design.

SB #09 – \$459.00

The Slavic Beauty Cream Separator is a high-performance electric centrifugal device designed for efficient and precise separation of whole milk into cream and skimmed milk. Suitable to small dairy farms, creameries, and home processing, it ensures reliable operation and consistent results.

Both separator parts are made with High-Quality anodized food grade metal parts.

MILKY FJ 350 EAR ELECTRIC CREAM SEPARATOR - 348 L/HR - 92 GAL/HR

Stainless Steel & Aluminum, High Quality Brush Motor, Anodized plates in drum.

(See operational video on our website.)

The Milky FJ350 electric cream separator is perfect for small to medium sized farms. Crafted of high quality stainless steel and aluminum, this unit is built to last.

- Processes up to 90 gallons of milk per hour
- Heavy duty stainless steel and aluminum construction
- High-quality brush motor
- Anodized plates in the drum

\$4,999.00

EZBC - \$650.00

UDDERLY EZ BUTTER CHURN

Homeowners 4 gallon butter churn with stainless steel paddle. Use your own power drill. Make butter in 9 minutes. (Drill not included.)

UEZ010 - \$69.85

Inox Steel Technical's Milk Coolers

With the popularity of our portable electric milking units, comes the demand for cooling tanks. Taking into account the specific needs and daily challenges of our individual customers, along with the extensive experience, professional design, and ongoing product enhancements, EZ Animal Products® is excited to be the exclusive distributor of Inox Steel Technical milk cooling tanks, ensuring the optimal care of milk.

Advantages of these milk coolers include:

- Much greater bottom insulation thickness, for better cooling and energy saving.
- An outlet elbow that eliminates foaming of milk when extracting milk with a pump.
- Agitator stops automatically when opening the lid, protecting the operator.
- Launch of the agitation, upon receipt of the sample. This function is missing from all other milk cooling tanks made by other manufacturers.
- Time protection of the compressor from instantaneous power outages, lasting 2 minutes.
- Tank base frame in series A1 15 - 115 gallon made with square tube rather than sheet metal.
- Welded bottoms using the latest technology and tested for high pressure resistance.

EZ Animal Products is offering these cooling tanks in five different sizes and to the standard voltage of 110-120 volts at 60 (Hz). As a continued sign of quality, you will find our logo on every tank. The following shows the quality, workmanship and why their tanks are above any of the competition in production of these small cooling tanks.

Filling a dozen, 3-quart jars from the EZ Milk Cooler.

"We have been using EZ Animal's products for over 2 years now, the first thing that impressed us is that everything performed as advertised. We have increased our sales more than double, we keep the milk chilled at 38 degrees, customers love that. The cream separator is outstanding, tripling our butter production, and the new EZ Coil Hose keeps everything clean and tidied up. Most importantly, VERY EZ TO CLEAN!!"

*Mervin Zimmerman
Healthy Foods
Orchard, IA*

"Everyone should have one of these EZ Milk Coolers, it stays chilled between 37 and 38 degrees, my clientele has doubled within the last year to over 290 customers!"

John Byler, Munfordville, KY

Using the 15 foot coil hose to clean out the cooler with the CLO2 Effervescent Tablets.

Solid machined lead-free brass fittings. Trivalent chrome plated, works in all weather. No kinks, no cracks, no leaky connections. Made in Oregon, USA. 5-year warranty.

Ultimate SS Heavy Duty hose nozzle to pair with the Water Right™ EZ Coil Hose \$39.95 each

Compact. Efficient. Beautiful.

When Chris Pratt, owner of Epic Stables LLC, chooses to endorse a company's product innovation in the equine industry, you know it is going to be world-class.

That is exactly what Buck Wheeler, owner of EZ Animal Products® knew might happen when he shared one of his latest discoveries with Chris at Chris's facility in Lexington, KY.

Made by Water Right™ in the USA, this self-storing coil hose is the perfect solution for washing efficiency and tidiness in your stall.

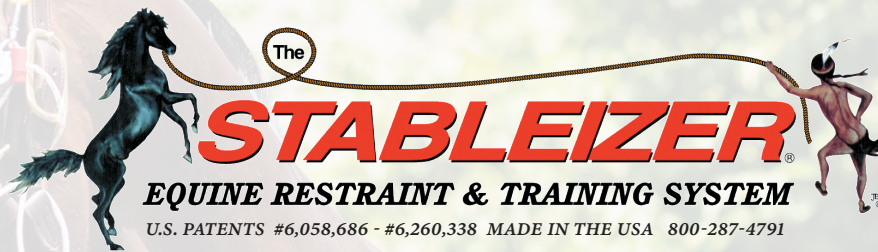

By attaching a hose to both sides of your wash stall, it gives you a manageable twenty five feet when fully extended to effortlessly spray your horse on both sides.

Almost too good to be true, we can confidently say there is no finer coil hose made in the world.

Street Sense, 1970
Kentucky Derby Winner

The Stableizer® was invented and patented in 1994 by horseman, inventor, and Hall of Fame trainer Buck Wheeler, his wife Karen, and son John. This stable gear has been used on two Kentucky Derby winners and by top equine professionals worldwide. There are several university research studies that show The Stableizer® is an extremely effective tool for equine lameness evaluation and isolating acupuncture points. It has also proven successful with training young horses, in assisting with minor veterinary procedures, during clipping, loading, and much more!

PROFESSIONAL ENDORSEMENT STATEMENT

The Stableizer®

*Dr Olivier Simon, Board Certified Specialist in Large Animal Surgery
The University of Adelaide, Australia*

My name is Dr Olivier Simon. I am a board certified specialist in large animal surgery, a 1992 graduate, and I have worked with horses since the age of 13. I have been using The Stableizer® for nearly three decades as part of my daily clinical practice.

I first discovered this exceptional device during my specialist residency training in large animal surgery in **Montreal, Canada**, and it has remained a cornerstone of my approach to equine handling ever since. Over the years, I have not only relied on it clinically, but have actively **educated clients, colleagues, and horse owners** to use The Stableizer® as a safer and more humane alternative to more painful or force based restraint methods. The Stableizer® allows **gentle handling, promotes calm cooperation, and—critically—facilitates active learning and trust from the horse.**

In my experience, it transforms many potentially stressful procedures into calm, controlled, and far safer interactions for both horse and handler.

Beyond anecdotal experience, my team and I have conducted **several scientific studies** evaluating the effects of The Stableizer®. Our research has demonstrated **clear physiological and behavioral advantages** when compared to traditional restraint techniques, including improvements in stress markers and lameness assessment reliability (O'Brien et al., 2025). Throughout my career, The Stableizer® has consistently reduced the need for sedation in routine, non painful procedures. Early in my professional life, after taking over a clinic in Belgium, a pharmaceutical representative once questioned why our sedative usage had dropped so dramatically. The answer was simple: **we no longer needed it.** The Stableizer® had become our default solution.

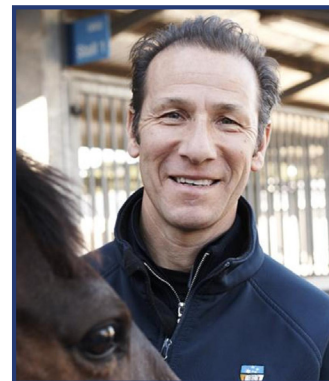

Today, it remains my **go to device** for managing needle shy, head shy, or reactive horses—situations in which time constraints do not allow for prolonged desensitization but safety cannot be compromised. I have also seen widespread adoption among farriers, many of whom now routinely use The Stableizer® after observing its effectiveness during hoof care, often eliminating the need for veterinary sedation altogether.

After nearly 30 years of consistent use across thousands of horses, **I consider The Stableizer® to be one of the most valuable, safe, and horse centred restraint devices available in modern equine practice.**

It has fundamentally improved the way we handle horses—clinically, ethically, and practically.

Dr Olivier Simon

DMV, Dipl. ECVS - Large Animal Surgery

Dr. Olivier Simon doing a Intra articular injection on both ankles, using The Stableizer®

THE STABLEIZER®

After more than fifty-five years in the horse training, breeding, sales and Equine consulting business I have added a few more little aids that can successfully be used as an aid in the starting of young colts, and helping to break some old bad habits in a safer and more humane manner for both the horse and the handler.

I have had the extreme pleasure of instructing the starting process with The Stableizer® on young stock at some of the most successful Thoroughbred and Quarter Horse training operations in the USA and Europe. Including all 9 units of the US Army and Cavalry, and worked with the wild mustangs at the BLM and at the Governors Horse Guards, #1 and #2. We were riding those Mustangs within 1 hour.

Sizing:

- Small: Mini Horses, Llamas
- Medium: Most all mature – Quarter Horses, Thoroughbreds, Arabians, Morgans, Etc. and Large Yearlings

4 Seasons Lawn Care, KY

Julie Boyle, KS

N. American Reindeer Association

Mfg. in House

It is well known that an animal will always move forward off pressure applied to its rear end. But traditional training methods put undue pressure on the head and neck of young animals. Instead, the Buck A Long™ is designed to keep the animal's head aligned with the rear end, but the source of pressure remains on the rear, thus protecting the head and neck. This Buck A Long™ method has been used on our Thoroughbred foals and calves for many years, starting the day they come out of the foaling stall. Check out our videos to see how the Buck A Long™ and other training products can help you!

BUCK-A-LONG

The Buck-A-Long is adjustable for the size of colt and it has two sliding thimbles and enables you lead a foal much easier. It is hand-braided and has a double snap so they will not get away and you are able to keep the head and body straight. This also makes a great tool to teach calves, goat, sheep, and reindeer to halter-lead!

INFORMATION

EZ Animal Products® is a family owned business started in 1995, out of sheer necessity to find a better and safer way to handle our Thoroughbred racing, breeding stock and our mini Jersey milk cows. We are a full service facility as we are the owners, inventors, and manufacturers. We assemble and pack all our products and ship directly to the end user in the U.S., Canada and internationally. Please read the following information carefully and if you have any questions don't hesitate to ask Buck, John or Karen. ALL OF OUR CONTACT INFO IS LISTED ABOVE.

PAYMENT OPTIONS & TERMS

We accept all major credit cards (except American Express), checks, or cash. Payment will be required from first-time customers before orders will be shipped. Personal check orders will be held until the check clears the bank.

SHIPPING INFORMATION

We ship most of the parcel shipments via UPS Ground (Next Day Air is also available). Large items are shipped via motor freight. We try to keep most of our items in stock and do our best to ship your order by the next business day after receiving the order, if the order is paid. If an item is out of stock, we will inform you promptly. Back orders will ship as soon as possible.

RETURN POLICY

Please call us for authorization to return any products. All items must be returned by 30 days from the purchase date. Items must be returned in clean, sellable condition. Special orders are not returnable. All returns may be subject to a restocking fee of 15%.

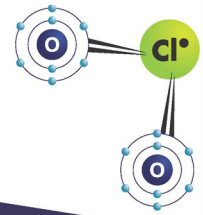

DAMAGES

Receiver will have to report any damaged products to the carrier upon receipt. Also, be sure to inspect your shipment for any shortages, prior to signing for the shipment. Either way, let us know as soon as possible, so we can make it right with you.

WARRANTY

We will exchange or repair all defective products or equipment for a period of 30 days from the purchase date, in accordance with the manufacturers' warranty. Warranty covers defects; not misuse, damage, abuse, or neglect of maintenance or use—nor damage due to electrical surges from storms or other acts of nature.

EZ Animal Products® is not responsible for misprints in this catalog. Prices, product design, and specifications are subject to change without notice, based on market conditions, tariffs, and/or availability.

Chlorine Dioxide is made up of one Chlorine Atom and two Oxygen Atoms, referenced as CLO₂. This makeup is used both as a diluted liquid, (aqueous) and gaseous Solution. It is certified for use by OMRI.

EZ Animal Products and Safrax have collaborated together and are happy to announce how to clean our Ultimate EZ Milking tubes, buckets, milk coolers and all our milking equipment with the use of CLO₂ Chlorine Dioxide Effervescent Tablets.

ALL-PURPOSE SANITIZER - REMOVES ALL PATHOGENS

TREATMENT:

- ✓ Water Potabilization
- ✓ Mold & Mildew Remover
- ✓ Fruit, Vegetables & Food Washing
- ✓ Animal Drinking Water
- ✓ Sanitizes Hard & Soft Surfaces
- ✓ Food Service Sanitation, With No Rinse Required!

"The CLO₂ tablets make washing my EZ Milker easier and faster, cutting my sanitizing time down to about 10 minutes. My milk testing results (including coliform and standard plate) have come back spotless every time and I can be confident that my family and customers are consuming a product that is safe and healthy!"

~ From Catherine Atwood, Lineville, AL
Milking 2 Cows Twice Daily

"These CLO₂ tablets get the equipment a lot cleaner, no buildup or black spots occur, I wouldn't be without them, it's cheaper than replacing the hoses, and keeps my milk coolers spotless."

~ From John Byler, Monfordsville, KY
Milking 24 Cows Twice Daily

CLO₂ Tablets are available in 6 ct, 24 ct, 36 ct, or 102 ct in the US and Canada (six tablets per alum pk.).

Mix 1 tablet to 5 gallons of water. Keep in closed containers in a cool place. 2 Quarts of mixture will clean entire milking system.

Scan the code to watch the tablets in use!
